DOLBY SYSTEM

8 TRACK HOME STEREO  
RECORDING DECK

## SERVICE MANUAL

## SPECIFICATIONS

Semi-Conductors	2 IC's, 17 transistors, 16 diodes, 1 thyristor
Power Source	AC 120V 60 Hz
Power Consumption	No more than 30W
Cartridge	Any 8 track cartridges
Wow and Flutter	No more than 0.15% (WRMS)
Fast Forward Time	Approx. 2 times
Frequency Response	30 ~ 15,000 Hz
Cross Talk	More than 45 dB
Signal to Noise Ratio	More than 45 dB
Input Level	Mic: 0.5 mV (Typical) Line: 100 mV (Typical)
Input Impedance	Line: 100 k $\Omega$
Output Level	Line: 580 mV
Output Impedance	Line: 80 $\Omega$

### RECORDING SECTION

Erasing Ratio	More than 50 dB
Dimensions (W x H x D)	375 x 115 x 275 mm (14-3/4 x 4-1/2 x 10-7/8 in.)
Weight	6.1 kg (13.4 lbs.)

"Manufactured under license from Dolby Laboratories Inc."

"The word 'Dolby' and  are trade marks of Dolby Laboratories Inc."

Fig.1

## 2. CIRCUIT DESCRIPTION

### • Recording Mode

NPN-NPN two-stage direct-coupled amplifiers (Q1, Q3) function as Microphone Amplifiers on "RECORD". With Microphone jack inserted in MIC, Line In is switched to MIC. Output at Line Out is 580mV with 400Hz at approximately 0.6mV input.

VR1 is the REC Level Control. Line Out terminal can be used as REC Monitor. And even when Dolby switch (S4) is ON, the frequency characteristics are flat.

The output (No. 7 terminal) of Dolby IC is added to REC Amplifiers (Q9, Q11). Meter Amplifier (Q7) activates Level Meter via Voltage Doubler Rectifier Circuits (D1, D3). Q9 and Q11 (two-stage direct-coupled REC Amplifiers) regulate the recording current with a Base Circuit and an Emitter Circuit (L1, C51).

R55, C45 and L1, C51 (Emitter Circuits) are high-frequency compensation circuits; R57 and C47 are low-frequency compensation circuits.

VR3 is a semifix resistor for adjusting recording current.

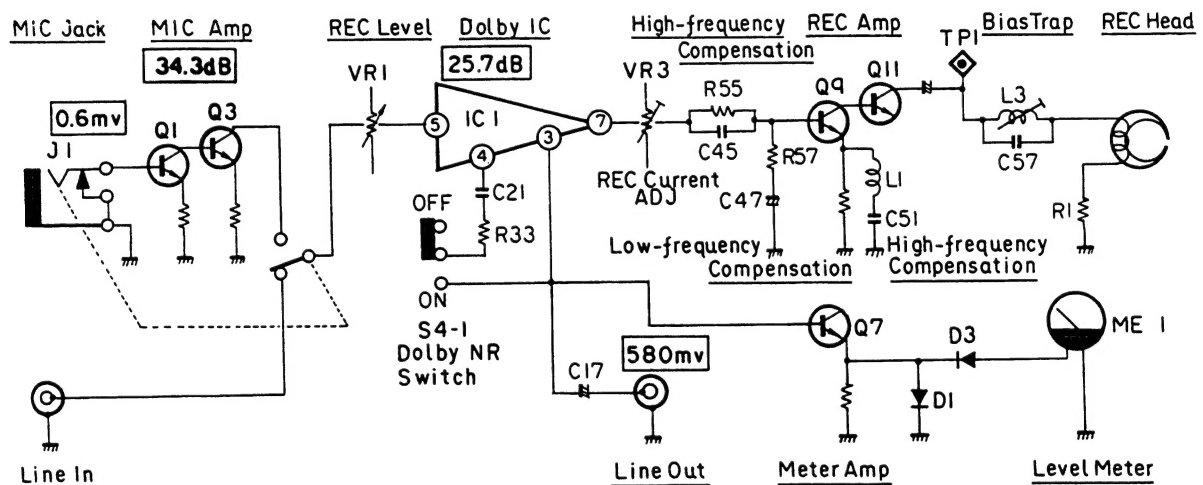

Fig.2

### • Playback Mode

When playing back, Q1 and Q3 function as NAB equalizer amplifiers. VR1 is a semifixed resistor for adjusting playback level. Q5 is a muting circuit for F.F. The signal added to No. 5 terminal of Dolby IC functions as same as it does when recording.

Fig.3

## 3. DISASSEMBLY ::

Fig.4

## 4. ADJUSTMENT

### 4.1 HEAD ADJUSTMENT

#### • Connection Diagram

Fig.5

#### • Azimuth Adjustment

1. Insert test tape PST-4.2 and change over program to "3". Adjust by turning azimuth adjusting screw so that the VTVM indicates maximum reading. After completion of adjustment, fasten the adjusting screw by using screwlock adhesive.

#### • Cross Talk Adjustment

1. Insert test tape P-328 and set program to "2" and adjust by turning cross talk adjusting nut so that the VTVM indicates minimum reading.  
2. Change over program "3" and confirm that the VTVM indicates maximum reading. If maximum output is not obtained, repeat steps from 1 to 2.

#### • Test Tape

Item \ Test tape	PST-4.2	P-328
Recording track	Full tracks	1, 3, 5, 7
Frequency	8 kHz	400 Hz
Level	- 13 dB	0 dB
Application	Azimuth	Cross talk

Fig. 6

## 4.2 PLAYBACK LEVEL ADJUSTMENT

### • Connection Diagram

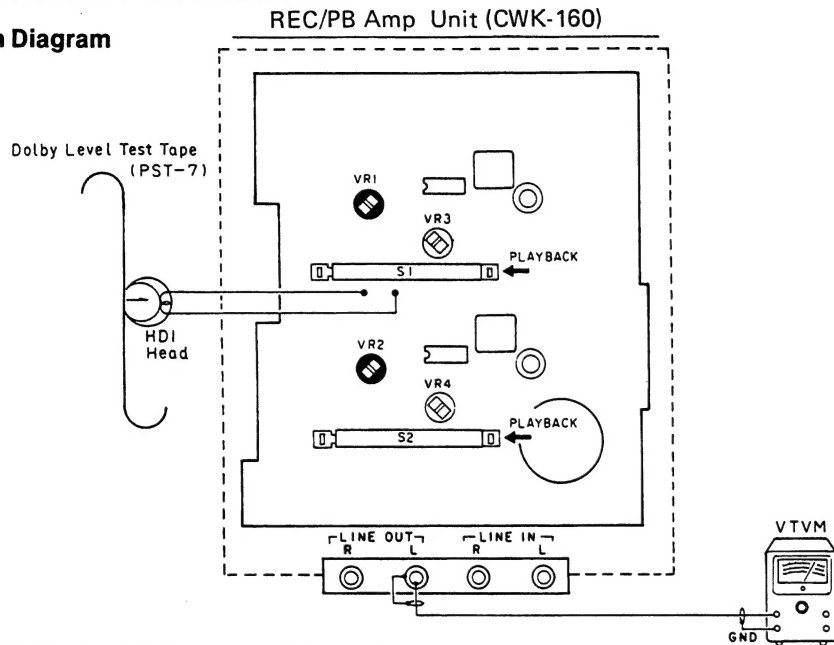

Fig. 7

### • To Adjust

1. With Dolby level test tape (PST-7) loaded, adjust the playback level control semifixed resistors (VR1 and VR2) so that output level of Line Out reaches 580mV.

## 4.3 BIAS AND BIAS TRAP ADJUSTMENT

### • Connection Diagram

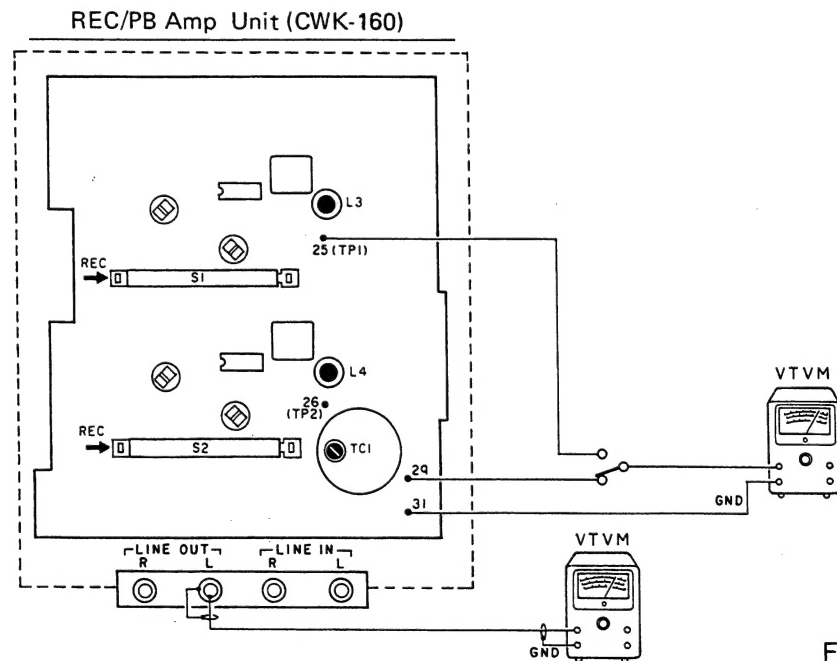

Fig. 8

### • To Adjust

1. With the equipment in recording mode, turn Record Level control to the minimum.
2. Connect VTVM across terminals 29 and 31(GND), and adjust the bias control ceramic trimmer (TC1) so that output level reaches 90mV.
3. Connect VTVM across terminals 25 (TP1), 26 (TP2) and 31(GND) and adjust L3 and L4 so the output level is

minimized.

4. Connect VTVM to Line Out. Ascertain that the reading on VTVM is less than - 50dBm.

### NOTE:

If not, check to see if Bottom Plate is installed or if Head is properly wired.

#### 4.4 CONFIRM THE INDICATION OF LEVEL METER

REC/PB Amp Unit (CWK-160)

##### • Connection Diagram

Fig. 9

##### • To Adjust

1. Add a 400Hz, -20dBm signal at Line In.
2. Adjust Record Level Control so that the pointer of Level Meter will come to +2 point (Dolby mark). Check

to make sure the output level of Line Out stays 580mV  $\pm$  1dB. If Level Meter does not indicate +2 point, check D1 ~ D4, C31, C32, R45 and R46 circuits.

#### 4.5 RECORD/PLAYBACK LEVEL ADJUSTMENT

REC/PB Amp Unit (CWK-160)

##### • Connection Diagram

Fig. 10

### • To Adjustment

1. Add a 400Hz, - 20dBm signal at Line In. With the equipment in recording mode, adjust Record Level control so the output level of Line Out is 580mV/400Hz (show in Fig. 9).
2. Make a recording on Scotch #157 (or Scotch high-output/low-noise) tape under the above condition. Be sure the playback output level of Line Out, when this tape is played back, is 580mV.
3. If not 580mV make a note of the error in terms of decibels.

4. Remove terminals 29 and 30 to be shorted, and reset the unit at recording mode. Connect VTVM across terminals 25 (TP1), 26 (TP2) and 31 (GND) and note its reading. Adjust to record level control semifixed resistor (VR3 and VR4) to compensate for the above error.
5. Repeat the above adjustments until playback output level reaches 580mV.

#### NOTE:

Be sure to use the test tape specified when making the above adjustments.

## 4.6 RECORDING CURRENT ADJUSTMENT

### • Connection Diagram

Fig. 11

### • To Adjust

1. Short the terminals 29 and 30 (see step 4, Record/playback Level Adjustment).
2. Add a 400Hz, - 20dBm signal at Line In, and connect VTVM to either end of terminals 3, 5 and 4, 6. With the equipment in recording mode, adjust Record Level control so output level is at - 70dBm.
3. It can then be judged that the unit is operating normally if the output level is increased by about 8dB when input is increased to 5kHz, and by about 17 dB when input increased to 10kHz.

If the output level is not proper, check C45, C46, L1, L2, C51 and C52 circuits, or replace Head if it is functioning properly.

#### NOTE:

Be sure to make Playback Level Adjustment and Record/playback Level Adjustment.

Changed  $\rightarrow$  CKP-023

## 8. NOMENCLATURE OF SCREWS, WASHERS AND NUTS

The following symbols stand for screws, washers and nuts as shown in exploded view.

Symbol	Description	Shape
RT	Brazier head tapping screw	
PT	Pan head tapping screw	
BT	Binding head tapping screw	
CT	Countersunk head tapping screw	
TT	Truss head tapping screw	
OCT	Oval countersunk head tapping screw	
PM	Pan head machine screw	
CM	Countersunk head machine screw	
OCM	Oval countersunk head machine screw	
TM	Truss head machine screw	
BM	Binding head machine screw	
PSA	Pan head screw with spring lock washer	
PSB	Pan head screw with spring lock washer and flat washer	
PSF	Pan head screw with flat washer	

Symbol	Description	Shape
EW	E type washer	
FW	Flat washer	
SW	Spring lock washer	
N	Nut	
WN	Washer faced nut	
ITW	Internal toothed lock washer	
OTW	Outernal toothed lock washer	
SC	Slotted set screw (Cone point)	
SF	Slotted set screw (Flat point)	
HS	Hexagon socket headless set screw	
OCW	Oval countersunk head wood screw	
CW	Countersunk head wood screw	
RW	Round head wood screw

## 8 TRACK HOME STEREO RECORDING DECK

### SERVICE MANUAL

### SPECIFICATIONS

Semi-Conductors	2 IC's, 17 transistors, 16 diodes, 1 thyristor
Power Source	AC 120/220/240V 50/60Hz
Power Consumption	No more than 30W
Cartridge	Any 8 track cartridges
Wow and Flutter	No more than 0.15% (WRMS)
Fast Forward Time	Approx. 2 times
Frequency Response	30 ~ 15,000 Hz
Cross Talk	More than 45 dB
Signal to Noise Ratio	More than 45 dB
Input Level	Mic: 0.5 mV (Typical) Line: 100 mV (Typical)
Input Impedance	Line: 100 k $\Omega$
Output Level	Line: 580 mV
Output Impedance	Line: 80 $\Omega$

#### RECORDING SECTION

Erasing Ratio	More than 50 dB
Dimensions (W x H x D)	375 x 115 x 275mm (14-3/4 x 4-1/2 x 10-7/8 in.)
Weight	6.1 kg (13.4 lbs.)

"Manufactured under license from Dolby Laboratories Inc."  
"The word 'Dolby' and  are trade marks of Dolby Laboratories Inc."

**Note:**  
Specifications and the design subject to possible modification without notice  
due to improvements.
